## Overview

# Last step: Update your nameservers to activate Cloudflare

This is the last step to allow Cloudflare to speed up and protect your web traffic.

[📖 Review Cloudflare fundamentals](#)

## 1. Log into your DNS provider (most likely your registrar)

→ Find your registrar on [ICANN Lookup](#)

If you purchased your domain through a reseller (e.g., Squarespace) or use a separate DNS provider, log into that account instead.

## 2. Make sure DNSSEC is off

Find and turn off the DNS security (DNSSEC) setting if it is on. You can re-enable it later through Cloudflare.

[📖 Provider-specific instructions](#)

## 3. Replace your current nameservers with Cloudflare nameservers

This is unlikely to cause downtime, but you may skip this and check your [DNS records](#) first.

A. Find the nameservers section

B. Add both of your assigned Cloudflare nameservers:

ashton.ns.cloudflare.com

[Click to copy](#)

[Skip to content](#)

lola.ns.cloudflare.com

[Click to copy](#)

C. Delete your other nameservers:

Need help? Follow our [set-up documentation](#) or [visit our support portal](#).

**i Registrars take up to 24 hours to process nameserver changes (quicker in most cases). We will email you when pnwsaunacda.com is active on Cloudflare.**

While in this [pending state](#), Cloudflare will respond to DNS queries on your assigned nameservers.

Once activated, SSL/TLS, DDoS protection, caching, and other automatic optimizations will go live for proxied DNS records, along with any custom settings you pre-configure.

Chat

Cloudflare will periodically check for nameserver updates.
